

MO Sheung, Sean

Hong Kong | mo.sheung.sean@gmail.com | 6364 6919

Professional Summary

AI Solutions Engineer, Co-Founder & CTO of Glowdening, and B.Sc. student at The Chinese University of Hong Kong with experience in computer vision, edge AI deployment, retrieval-augmented systems, and AI product development. Hands-on experience building OpenCV and YOLO-based solutions, deploying AI workloads on NVIDIA Jetson devices, and designing AI-powered memory and reflection systems. Ranked 17th among 249 teams worldwide at the 2025 VEX Robotics World Championship.

Technical Skills

Programming: Python, C++, C, Java, JavaScript

Computer Vision: YOLO, YOLOE, OpenCV, OCR testing, object detection, pose estimation

LLM & GenAI: Retrieval-Augmented Generation (RAG), Llama.cpp, Unsloth, Local LLM Deployment, OpenAI API, Prompt Engineering, AI Model Evaluation

Robotics: C++, PROS, LemLib, PID Control, Pure Pursuit, Autonomous Path Planning, Sensor Fusion

Deployment & Tools: NVIDIA Jetson, Git, Microsoft SQL Server, Excel

Libraries: pandas, NumPy, matplotlib

Work Experience

Co-Founder & CTO, Glowdening 2026 – Present

- Lead the technical architecture and AI strategy for Glowdening, an AI-powered wellbeing companion designed to help users manage overwhelm, reduce cognitive load, and navigate daily life with self-compassion rather than productivity pressure.
- Exploring and prototyping long-term memory and retrieval systems using embeddings, semantic search, and Retrieval-Augmented Generation (RAG) techniques to provide context-aware guidance and personalized reflections.
- Architect AI experiences that integrate user reflections, tasks, and contextual information to generate gentle, energy-aware recommendations while prioritizing user trust, privacy, and emotional safety.
- Direct product and engineering decisions across AI system design, backend architecture, prompt engineering, knowledge management, and user experience development.
- Collaborate with co-founders and stakeholders to translate user research and product vision into scalable AI features and technical roadmaps.

AI Solutions Engineer (Part-Time Contract), ISS Facility Services Limited, Hong Kong Sep 2026 – Present

- Continue developing and evaluating AI and computer vision proof-of-concept solutions using Python, OpenCV, YOLO, and NVIDIA Jetson edge devices.
- Build OpenCV-based image and video processing pipelines for model inference, detection visualization, performance testing, and technical demonstrations.
- Support the deployment and integration of AI inference workflows on edge devices, including environment configuration, API integration, and system troubleshooting.
- Collaborate with internal stakeholders, developers, and external vendors to evaluate technical feasibility, investigate system issues, and refine implementation requirements.

AI & Robotics Intern, ISS Facility Services Limited, Hong Kong Jun 2026 – Aug 2026

- Tested an AI-powered OCR platform, performed root-cause analysis on processing failures, and collaborated with developers to improve system reliability and exception handling.
- Refined OCR prompts, instruction sets, user workflows, and error-handling logic across varied document and failure scenarios.

- Trained and evaluated custom YOLO-based object detection models and developed computer vision pipelines for smoking and fall-detection use cases.
- Configured GPU development environments and NVIDIA Jetson edge devices, supporting inference deployment, API integration, and performance testing.
- Benchmarked vendor AI solutions and supported proof-of-concept evaluations involving thermal imaging, AR-assisted detection, and robotic applications.
- Presented live technical demonstrations and implementation recommendations to senior stakeholders and contributed to discussions with external vendors.
- Authored an operations manual consolidating system specifications, deployment procedures, vendor workflows, and supporting manufacturer documentation.

Office Intern, Safe Concept, Hong Kong

Jan 2024 – Apr 2024

- Analyzed product and sales data in Excel to support reporting and commercial decision-making.
- Communicated product information to clients and healthcare professionals and responded to product-related enquiries.
- Maintained CRM records and supported telephone-based customer engagement.

Technical Projects

Lead Programmer, Vex Robotic Team – CUHK, Hong Kong

Sep 2024 – Sep 2025

- Led programming and match-driving operations for CUHK's competitive robotics team, representing Hong Kong and ranking **17th among 249 teams worldwide** at the 2025 VEX Robotics World Championship.
- Developed autonomous and driver-controlled systems in **C++** using **PROS** and **LemLib**, implementing **PID control**, **Pure Pursuit**, and autonomous path-planning algorithms.
- Integrated sensor data through **sensor fusion** to improve robot localization, movement accuracy, and autonomous navigation reliability.
- Tuned control parameters and optimized autonomous routines through iterative testing, match analysis, and rapid prototyping.
- Diagnosed software, sensor, motor, and mechanical integration issues in collaboration with engineering teammates under tournament time constraints.
- Produced technical documentation and delivered team presentations to communicate system designs, testing results, and programming decisions.

AI-Assisted Figure Skating Judging System

Academic AI Project | CUHK

- Proposed an AI-assisted judging workflow using pose estimation and anonymized 3D skeletal representations to improve consistency in figure-skating technical scoring.
- Researched VideoPose3D and related 2D-to-3D human pose estimation techniques for motion reconstruction and technical-element analysis.
- Designed a conceptual pipeline covering multi-camera capture, pose reconstruction, specialist annotation, and model-assisted scoring.
- Reviewed research on judging inconsistency and evaluated the technical and ethical considerations of using AI in sports assessment.

Education

The Chinese University of Hong Kong, B.Sc. in Learning Design and Technology

Sep 2023 – Present

- Expected Graduation: 2027
- **Relevant Coursework:** AI in Action, Programming, Data Analysis, Multimedia Systems, Educational Technology, Web Design

Languages

Cantonese (Native); English, Putonghua (Fluent)
